OVERVIEW

This document provides an overview of the resolved issues and known issues in the Fortanix Data Security Manager (DSM) SaaS 4.12.2132 patch release.

📌 **NOTE**: This release is for **SaaS only** and not available for On-Prem installations.

BUG FIXES

- Fixed Google Cloud's operations suite (formerly Stackdriver) to reuse TLS connections **(JIRA: PROD-5889)**.

KNOWN ISSUES

- The sync key API returns a "400 status code and response error" due to the short-term access token expiry during the sync key operation of a group linked to AWS KMS (**JIRA: PROD-3903**).
- `exclude` does not work in the `proxy` config for operations such as attestation (**JIRA: PROD: 3311**).

For a complete list of new features, enhancements to existing features, other improvements, and bug fixes refer to the full description of the [4.12 DSM SaaS release](#)

BEST PRACTICES

Because our quality assurance process includes continuous security testing, Fortanix recommends keeping all Fortanix products updated with the latest releases as soon as possible. As an overall strategy to reduce risk exposure, customers are encouraged to follow best practices, which include:

- Always keep the product version up to date.
- Only issue accounts to trusted administrators.
