1.0 INTRODUCTION

This article describes how to sign up for a free trial and get started with Fortanix Data Security Manager (DSM) Software as a Service (SaaS).

Fortanix DSM SaaS is the world's first cloud service secured with Intel® SGX. With Fortanix DSM SaaS, you can securely generate, store, and use cryptographic keys and certificates, as well as other secrets such as passwords, API keys, tokens, or any blob of data. Your business-critical applications and containers can integrate with Fortanix DSM SaaS using legacy cryptographic interfaces or using the native Fortanix DSM SaaS RESTful interface.

Fortanix DSM SaaS uses built-in cryptography in Intel Xeon® CPUs to help protect the customer's keys and data from all external agents, reducing the system complexity greatly by removing reliance on characteristics of the physical boxes. Intel SGX enclaves prevent access to customer's keys or data by Fortanix or any other cloud service provider.
